

SCOPE OF WORK

Finance Tracker iOS App — MVP

Prepared by	Daniel Sanchez — Independent iOS Developer
Prepared for	Natalia Zhyvopystseva
Date	May 18, 2026
Platform	iOS only (iPhone)
Tech Stack	SwiftUI + Swift
Distribution	Apple App Store — United States only (MVP)
Project Type	Fixed-Price Contract with 2 Milestones
Total Price	\$5,000 USD

1. Project Summary

This document defines the full scope of work for the development, testing, and App Store submission of a personal finance tracking iOS application, referred to throughout this document as the "Finance Tracker App."

The client (Natalia) has an existing prototype built as a web-based Claude artifact (React/JSX). This prototype defines the complete feature set for this engagement. The contractor (Daniel Sanchez) will rebuild the application natively in SwiftUI for iPhone, faithfully translating all existing prototype features, and guide the client through the App Store submission process under her own Apple Developer account.

The UI will be designed with a clean, modern aesthetic inspired by Rocket Money — clear data hierarchy, readable typography, intuitive navigation, and a polished feel that makes personal finance approachable rather than overwhelming.

This is an MVP release targeting the U.S. App Store. No paywall, in-app purchases, or subscription billing integration is included in this version — the app will be free to download. Features listed as "future scope" are explicitly excluded from this engagement but are documented for planning purposes.

2. Goals & Objectives

- Faithfully rebuild the existing web prototype as a native iOS app in SwiftUI, preserving all current features
- Launch on the U.S. App Store under the client's own Apple Developer account
- Provide a clean, modern UI that feels intuitive, especially for users who are not naturally finance-savvy
- Teach the client enough about the App Store process and app management to handle future updates independently
- Deliver well-documented source code that the client owns outright upon final payment

3. Technology: SwiftUI (Native iOS)

The app will be built entirely in SwiftUI, Apple's modern declarative UI framework. Below is a summary of the trade-offs considered.

Why SwiftUI Was Chosen for This MVP

SwiftUI (Chosen)	React Native (Considered)
✓ Native Apple performance & animations ✓ Direct access to all iOS APIs ✓ Faster App Store approval (fewer compliance issues) ✓ Smaller app binary size ✓ Easier to learn and maintain for solo developer ✗ iOS only (Android requires separate Swift codebase)	✓ Single codebase for iOS and Android ✗ Larger project setup, more dependencies ✗ Bridge overhead can slow UI on older devices ✗ More complex App Store submission setup ✗ Higher cost to build for this scope

Decision: SwiftUI is the right choice for this MVP. The app targets iOS only, the budget is constrained, and SwiftUI will yield a smoother, more native experience. If the client wishes to expand to Android after launch, that would be a separate engagement.

4. Scope of Work — What's Included

The feature set for this engagement mirrors the existing prototype exactly. No features beyond what is listed below will be added without a signed change order.

4.1 Core Features

- Dashboard / Home Screen
 - Month/year header with active trip label if trip mode is on
 - Balance card showing net balance, total income, and total expenses for the current month
 - Month-over-month spending comparison (% change vs. previous month)
 - Wallet cards row showing individual wallet balances and total across all wallets
 - Quick Actions strip — one-tap shortcuts for frequent transactions (up to 6, user-configurable)
 - Budget alert banners for categories at 80%+ or over-budget
 - Recent transactions grouped by day
- Income & Expense Tracking
 - Add, edit, and delete income or expense entries
 - Amount input with currency symbol, type toggle (income / expense)
 - Category selection from predefined and custom categories
 - Wallet selector per transaction
 - Date picker, optional note, and optional comma-separated tags
 - Transactions associated with an active trip automatically tagged to that trip
- Multiple Wallets
 - Three default wallets: Cash, Card, Savings
 - Add, rename, and delete custom wallets with custom emoji and color
 - Per-wallet balance calculated from all-time transactions
- Custom Categories
 - Default expense categories: Food, Transport, Home, Fun, Health, Shopping, Travel, Other
 - Default income categories: Salary, Freelance, Gift, Investment, Other
 - Add, edit, and delete custom categories with emoji and color picker
 - Default categories cannot be deleted
- Monthly Budgets
 - Set a monthly spending limit per expense category
 - Visual progress bars showing spent vs. budget limit
 - Alert banners on the home screen when a category hits 80% or exceeds 100%
- Trip Mode
 - Create named trips with an optional total budget
 - Activate a trip to automatically tag new expense transactions to that trip
 - Per-trip spending total with budget progress bar
 - Multiple trips can exist; only one active at a time
- Savings Goals
 - Create named goals with a target amount and emoji icon
 - Manually add amounts saved toward each goal
 - Progress bar showing saved vs. target
- Subscriptions Tracker
 - Log subscriptions by name, amount, and billing period (monthly or yearly)
 - Quick-select presets: Netflix, Spotify, YouTube, iCloud, Apple Music, Gym
 - Running monthly total shown at the bottom of the list
- Recurring Transactions

- Create recurring income or expense rules with weekly, monthly, or yearly frequency
- Recurring entries auto-generate transactions on schedule when the app is opened
- View and delete active recurring rules
- **Calendar View**
 - Monthly calendar with daily expense/income totals shown on each day cell
 - Tap a day to see all transactions for that date
 - Navigate between months
- **Statistics**
 - Pie chart of spending broken down by category
 - Period selector: last 7 days, current month, current year
 - Category breakdown list with percentage and amount
 - Budget progress section on the Stats tab
- **Search & Filtering**
 - Full-text search across category name, wallet name, note, amount, and tags
 - Results displayed as a filtered transaction list
- **All Transactions View**
 - Complete transaction history grouped by day
 - Edit or delete any transaction inline
 - Save any transaction as a Quick Action from the list
- **Multi-Currency Support**
 - 14 currencies supported: USD, EUR, GBP, AED, RUB, JPY, CNY, KZT, TRY, INR, CHF, CAD, AUD, THB
 - Currency selector with symbol and name; display currency applies globally
 - No live exchange rate conversion — static display only
- **Data Export & Backup**
 - Export all transactions to CSV file
 - Full JSON backup of all app data (transactions, wallets, categories, budgets, goals, subscriptions, recurring rules)
 - Restore from a previously saved JSON backup file
- **Onboarding**
 - 4-screen onboarding flow shown on first launch: Welcome, Multiple Wallets, Travel Friendly, Privacy First
 - Skippable after the first screen
- **Settings**
 - Toggle light / dark theme
 - Change display currency
 - Access backup, restore, and CSV export
- **Light / Dark Mode**
 - Light mode default: soft white/neutral backgrounds with muted rose, lavender, or sage green accents — inspired by Rocket Money with a feminine aesthetic
 - Dark mode available as a user toggle, adapted to match the lighter theme's color language
 - User-toggled via Settings
- **Local Data Persistence**
 - All data stored on-device using SwiftData — no internet connection required
 - No user accounts, no servers, no cloud sync

4.2 UI / UX

The visual design will be inspired by Rocket Money's clean, consumer-grade aesthetic — not a direct copy, but using it as a reference point for layout clarity, information hierarchy, and the overall feeling of a polished, trustworthy finance app.

- Design inspiration: Rocket Money — clean card-based layouts, clear typographic hierarchy, approachable color usage, and a UI that makes financial data easy to scan at a glance
- Color palette inspired by Rocket Money with a feminine sensibility: soft white and light neutral backgrounds, accents in muted rose, lavender, or sage green, with dark readable text — approachable and modern rather than the prototype's dark brown theme
- Serif typography (e.g. New York or similar Apple system serif) for balance figures and headings; system sans-serif (SF Pro) for all body and UI text
- Card-based layout for dashboard summaries, wallets, budgets, and goals — consistent with Rocket Money's visual language
- Smooth native iOS transitions and micro-animations (e.g. progress bars, modal sheets, swipe-to-delete)
- Bottom tab navigation: Home, Stats, Calendar, Plans, All Transactions
- Floating action button (+) for adding new transactions
- Proper Safe Area handling for notched and Dynamic Island iPhones

4.3 App Store Submission

- Set up app in App Store Connect under client's Apple Developer account
- Create required App Store assets: app icon (all required sizes) and screenshots for required iPhone sizes
- Write App Store listing copy: title, subtitle, description, keywords, and category (Finance)
- Submit basic privacy policy URL to App Store (client to host; a simple template will be provided by contractor)
- Handle Apple review process — respond to any rejections and resubmit until approved
- Release to the U.S. App Store upon approval

Note: No paywall, in-app purchases, or StoreKit integration is included in this MVP. The app will be released as a free download. Monetization can be added in a future engagement.

4.4 Knowledge Transfer & Coaching

- Two (2) live video calls included in this engagement:
 - Call 1 — Client's choice: review app progress, discuss feature decisions, or learn about the development workflow and vibe coding process with AI tools
 - Call 2 — App Store Submission Walk-Through: conducted live together so client can learn the full submission process firsthand

- Basic written instructions on how to manage the app post-launch (submitting updates, viewing App Store Connect analytics, responding to reviews)
- All source code delivered with comments explaining key files and structure

5. Out of Scope (Not Included in This Contract)

The following items are explicitly excluded from this engagement. They may be addressed in future contracts.

Excluded Item	Notes / Future Consideration
Paywall / in-app purchases / StoreKit	Not included in MVP — app is free to download. Can be added in a future engagement once product-market fit is validated
Android / Google Play version	Separate engagement; recommended after iOS launch proves concept
Bank account / card integration	Requires Plaid or similar API, backend infrastructure, and financial compliance review — future scope
Live currency exchange rates	Static display only in MVP; live rates require a third-party API — future scope
Backend / server / cloud sync	All data is stored locally on-device in MVP; cloud sync is a future feature
Marketing, ASO, or social media	Client is handling independently; no marketing services are included
Landing page / website	Not included in this scope
International App Store release	U.S. only for MVP; worldwide release to be evaluated post-launch
Customer support system	Not included
Ongoing maintenance retainer	Available at contractor's standard hourly rate after project completion

6. Milestones & Payment Schedule

Milestone	Deliverables	Timeline	Payment
Milestone	All features from Section 4.1 built and	~3 weeks	\$2,500 USD

1	functional UI complete with light/dark mode and iOS polish App deployed to TestFlight for client testing Client reviews, tests, and approves the build	from start	
Milestone 2	Bug fixes and refinements based on TestFlight feedback Final UI polish and edge case handling App Store listing assets and copy prepared App submitted to Apple Review — approved and live App Store submission walk-through call with client Full source code and documentation delivered to client	~1–2 weeks after M1 approval	\$2,500 USD
TOTAL		~4–5 weeks	\$5,000 USD

Note: Work will begin only after the client has agreed to this Scope of Work and funded Milestone 1 (\$2,500 USD) on Upwork. The 4–5 week timeline starts from that date. The estimate assumes reasonable responsiveness from the client for feedback and testing.

7. Client Responsibilities

The following items are required from the client for this project to proceed:

- Agreement & Milestone 1 Funding — Work will not begin until the client has reviewed and agreed to this Scope of Work, and has funded Milestone 1 (\$2,500 USD) through Upwork. This is a required condition before any development starts.
- App Name — The client should brainstorm and suggest a name for the app prior to development. The app name appears on the App Store listing, the home screen icon, and throughout the submission process. If no name is provided before development begins, the contractor will assign a working default name to proceed.
- Apple Developer Account — Required before work can begin on Milestone 2. Enroll at <https://developer.apple.com/programs/> (Individual account, \$99/year fee paid by client)
- TestFlight Testing — Client agrees to download and test the app via TestFlight during Milestone 1 and provide timely, clear feedback
- Privacy Policy — Client must host a basic privacy policy at a public URL prior to App Store submission. A simple template will be provided by the contractor
- Upwork Account / Two-Factor Authentication — Client must be available to assist with any Apple account two-factor authentication prompts during submission
- Timely Feedback — Delays in client feedback may affect the estimated timeline; contractor is not responsible for timeline overruns caused by delayed approvals

8. General Terms

8.0 Commencement of Work

Development will not begin until both of the following conditions are met: (1) the client has reviewed and agreed to this Scope of Work in full, and (2) Milestone 1 (\$2,500 USD) has been funded through Upwork. No work, planning, or code will be produced prior to these conditions being satisfied.

8.1 Ownership & IP

Upon receipt of the final payment (Milestone 2), the client receives full ownership of the source code, assets, and all project files. Prior to final payment, the contractor retains rights to all work product.

8.2 Revisions

Each milestone includes one round of revisions based on client feedback. Additional revision rounds are subject to the contractor's standard hourly rate of \$75/hr. Revisions are changes to features within the agreed scope — new feature requests are treated as change orders.

8.3 Change Orders

Any feature requests or changes outside this scope of work will be handled as a separate change order with a new price agreed upon in writing before work begins.

8.4 App Store Approval

The contractor will make all reasonable efforts to ensure Apple approves the app. Apple's review decisions are outside the contractor's control. The contractor will handle rejections and resubmit at no additional charge, as long as rejections are related to scope items in this document.

8.5 Communication

Primary communication will be via Upwork messages. The client should expect responses within 24–48 hours on business days. Two video calls are included as documented in Section 4.4.

8.6 Confidentiality

The contractor agrees to keep all client information, app features, and source code confidential and will not share or publish any aspect of the project without the client's written consent.

9. Agreement

Acceptance of this Scope of Work is confirmed through the Upwork platform. By funding Milestone 1 (\$2,500 USD) on Upwork, the client acknowledges that she has read, understood, and agreed to all terms outlined in this document. The Upwork message thread between both parties serves as the written record of agreement.

No physical or digital signature is required. The act of funding the first milestone constitutes full acceptance of this Scope of Work.

This document was prepared in connection with an Upwork contract engagement.
